

A new dimension in jigsaw puzzles

Watching the emergence of the world's greatest cities right before your very eyes is possible thanks to a stunning advancement in puzzles – the worlds first 4D Jigsaw Puzzle.

Interplay's Cityscape Time Puzzle is an amazing new jigsaw, which recreates the greatest cities of the world; not only in the three dimensions of length, width and depth, but with the added fourth dimension – Time! Now the favourite activity of jigsawing is to enter a new and exciting era as you create the Cities of London and New York and watch them develop as they have over many decades; but in just a few hours.

London pre-and post war – right through till modern day

London has many landmarks synonymous with the city and few of us can remember what the horizon was like before they were there. Modern day buildings such as the new skyscraper built on the site of the old Baltic Exchange now blends beautifully with classical architecture such as St Paul's. But, what was the skyline like before the "Gherkin" appeared?

Cityscape is a pioneering puzzle - a trip back in time and a fun lesson on architecture not to mention the ideal way to learn more about the geography of this great city. The Time Poster that is included guides you through the decades, adding buildings along the way in their correct chronological order. For example: Complete the puzzle to 1939 and it will be an exact replica of how London looked at that time; while in 1945 they will be able to experience the devastation caused to the city by the Second World War.

Challenging

The first layer of the Cityscape Time Puzzle includes over 500 jigsaw pieces and creates the landscape, while the second, support layer, provides the location of key areas including historical buildings and parks.

The third layer comprises the buildings – and as this layer is completed – you'll get an insider's view of the panoramic changes the UK's capital city has undergone. The result is a puzzle that is challenging to even the most avid puzzler, but surely more intriguing than any puzzle that's gone before.

New York! New York!

The Cityscape 4D Time Puzzle range also includes New York. Some would say that this is the most famous skyline of all! Now Downtown Manhattan can be recreated from a time when skyscrapers were few and far between, till now when the hard bedrock of Mid and Downtown has been covered with some of the most impressive buildings of all time.

Poignant to the extreme

The New York Cityscape serves as perfect tool for before and after a trip to the city either to whet your appetite or as a reminder of a visit to the Big Apple. It's also a heart-rending reminder of one of the most significant happenings of recent times, the collapse of the World Trade Centre Twin Towers. When as you reach 2001 the Twin towers are tragically removed from the puzzle landscape.

More Cities - More puzzles

Cityscape puzzles are also planned for Chicago, Hong Kong, Las Vegas, Paris and Toronto. Each is guaranteed to not only appeal to jigsaw puzzle fanatics across the globe, but also tourists and those with a personal interest in all of these famous cities.

Notes to Editors: Interplay's Cityscape Puzzles will be available from Interplay in late spring, but for more information images or samples please contact Lauren at Evolution Pr on 01327 701 702 or email Lauren@evolution-pr.co.uk
